

## vebro project showcase

# Cordwallis Group Bicester

### the challenge

900m<sup>2</sup> of protective polymer flooring required to deliver a protective wearing surface in the new automotive vehicle maintenance and repair centre.

### meet the client

Cordwallis Group – a customer-focused automotive business with franchises of Volkswagen Commercial Vehicle, MAN Truck and Isuzu Truck located across the London and Thames Valley area.

### the project

Cordwallis Group's new purpose-built commercial vehicle centre located in Bicester, Oxfordshire. The facility, which has relocated from a previous facility in Eynsham, will now act as an authorised repair and maintenance centre with approved used vehicles also for sale on the forecourt.

### key service criteria

Chemical resistance

Oil / stain resistance

Robust & durable

Slip resistant

Easy-to-clean & maintain

Linemarking & demarcation

## vebro's solution

After having carried out all of the required substrate preparation, Vebro Polymers recommended **vebrodeck ID** – a hybrid PU / epoxy floor system that is typically used on intermediate decks of multi-level car parks, to deliver the necessary strength and performance required for the busy automotive repair shop.

The system incorporates **vebro PU SC Primer** – a scratch primer and levelling layer used to seal and smooth the prepared concrete prior to overcoating with resin systems, preventing displaced air causing defects in the finished surface.

## meet the installer

RFS (Resin Flooring Specialists) have completed all surface preparation and polymer flooring installation works at the Bicester site.

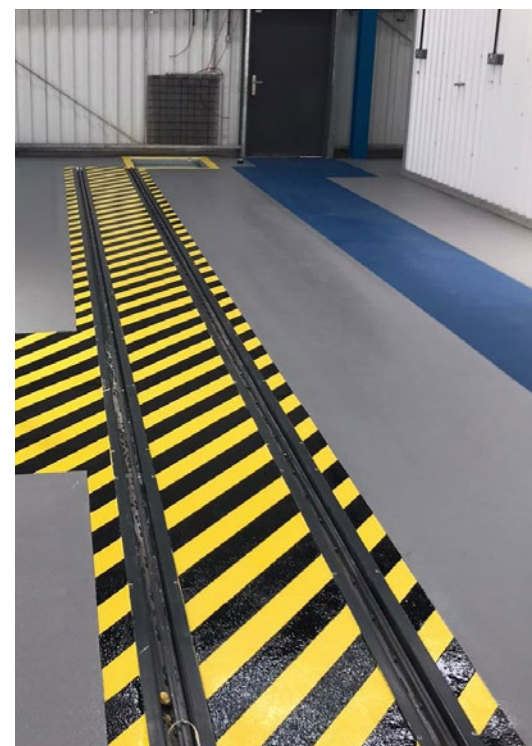

RFS are one of the UK's leading resin flooring installers. Based in Kent, and working throughout London and the South of England, the company work alongside the UK's largest construction companies, as well as working direct for clients across a wide range of industry sectors.

After a full quartz broadcast, **vebro EP Universal**, a pigmented high-build epoxy coating was laid with a rubber squeegee and back-rolled to provide a gloss-finish, slip-resistant topcoat that is open to full operational traffic in 24 hours.

Dusty Grey was chosen for main areas with Traffic Blue used to denote walkways and yellow and black cross-hatching around inspection pits.

Mindful of slip resistance, cleaning, performance and aesthetics, RFS pride themselves on being able to deliver the right solution for all resin flooring needs no matter what the environment.

RFS are members of the Resin Flooring Association – FeRFA – and Construction Line as well as being an Alcumus Safe Contractor and CHAS Accredited contractor.
