

# a guide to vebro's specification method

delivering tailor-made  
flooring solutions every time

**vebro**polymers

# a big **hello** from vebro

Vebro Polymers is a global supplier of polymer flooring solutions, specialist coatings, pump screeds, rapid-drying screed additives and car park deck wearing and waterproofing solutions.

Our products and systems have been expertly designed for use in a wide variety of applications.

We can also provide specialist materials for use on fast turnaround new-build or renovation projects as well as those required for external applications or subfloor preparation prior to the installation of final finishes.

## industries we serve

 industrial & manufacturing

 food & beverage

 parking garages

 commercial venues

 prison buildings

 shopping centres

 institutional buildings

 mixed-use developments

 transport & infrastructure

 external areas

## our **big** promise

Vebro Polymers has been formed by like-minded individuals who — at the time — had over 200 years' combined experience in the polymer flooring, coatings and construction chemicals industry.

The company was founded on a simple service promise to customers, which aims to provide the best quality, agility and reliability in the industry.

Quality

Agility

Reliability

## global team, local expertise

Founded in the UK, Vebro Polymers has grown, establishing hub HQs and partnerships to serve local markets across the world.

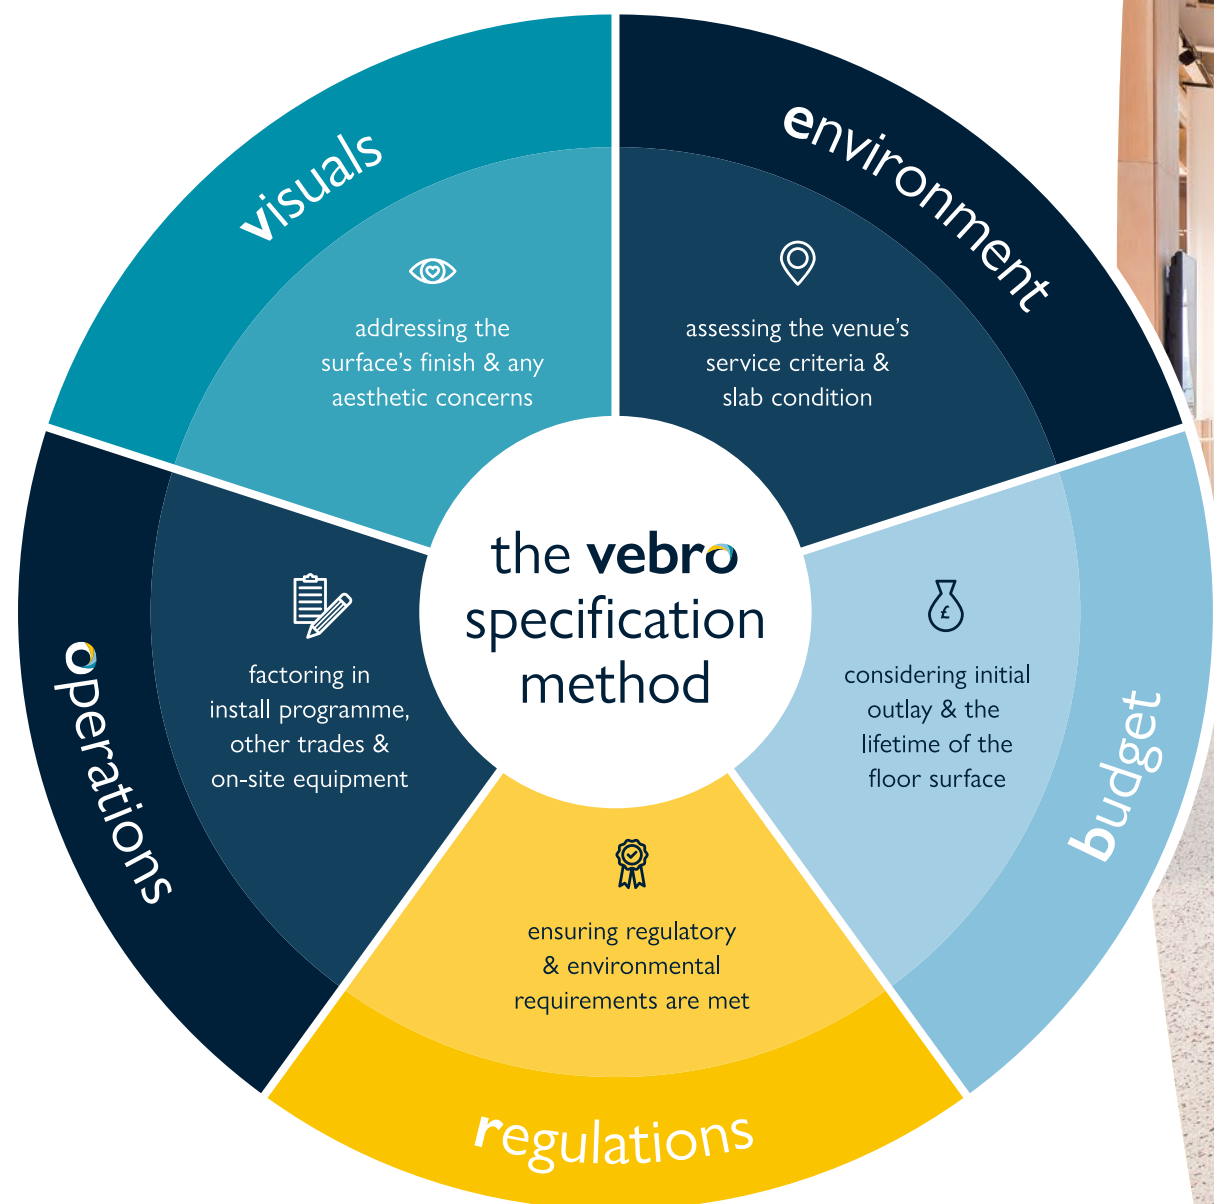

# introducing the **vebro** method

Vebro promotes a specification framework that considers the specific requirements of each surface to deliver a tailor-made solution every time.

From assessing the condition of the slab to considering installation logistics, evaluating service criteria and understanding the financial, regulatory and environmental implications, the **vebro** specification method guides the polymer flooring selection process for any commercial or industrial new-build or renovation project.

# specification considerations

## visuals

What should the surface look like?  
Is the area public facing?  
Are there any aesthetic concerns?

## environment

Where is the surface being installed?  
What are the service criteria?  
What is the existing slab's condition?

## budget

How much investment has been allocated to the flooring package?  
What is the desired life expectancy?

## regulations

Is compliance with specific standards required?  
Does the project promote high environmental stewardship?

## operations

What is the install programme?  
Will other trades be on site?  
Will equipment be moved out?

## let's talk...

While there are many more questions that can – and *should* – be asked, these considerations are designed to prompt a full site assessment that will ensure the correct resin floor specification.

Our global Specifications team is on hand throughout the task of specifying polymer flooring solutions and screeds for commercial and industrial applications.
