

vebro project showcase

Hyundai, UK

the challenge

A suitable polymer floor system was required for a car repair and maintenance workshop, to deliver a high-performance finish, as well as mitigate oil contamination in the substrate.

meet the client

Hyundai, originally founded in Seoul, South Korea in 1967 and one of the most recognised car brands across the globe, entered the UK market in 1982.

The company's network of repair centres provides drivers of the brand's vehicles across the UK with servicing, repair and maintenance.

the project

After 15 years service, the previously installed high-build coating system in this 900 m² Hyundai repair workshop was in need of some attention.

Not only was the floor area damaged, dirty and drab, the risk of slips and trips across the facility was becoming problematic.

key service criteria

Durable & resistant

Chemical resistant

Slip resistant

Easy to clean & maintain

Mitigate contaminated substrate

vebro's solution

After suitable mechanical preparation, repairs and infills, the substrate was coated with **vebro** EP OT Primer, a two-component epoxy priming product that is tolerant of residual oil contamination in concrete and cementitious floors, improving the adhesion of subsequent polymer floor systems.

Chosen in RAL 7038 Agate Grey, Vebro Polymers' high build coating system, **vebro**res EP HBC was able to deliver the perfect level of resistance

meet the installer

Quickset Resin Flooring are an independent, specialist resin flooring contractor based in the West Midlands, installing all types of resin flooring including epoxy, polyurethane and methyl methacrylate (MMA) across the UK.

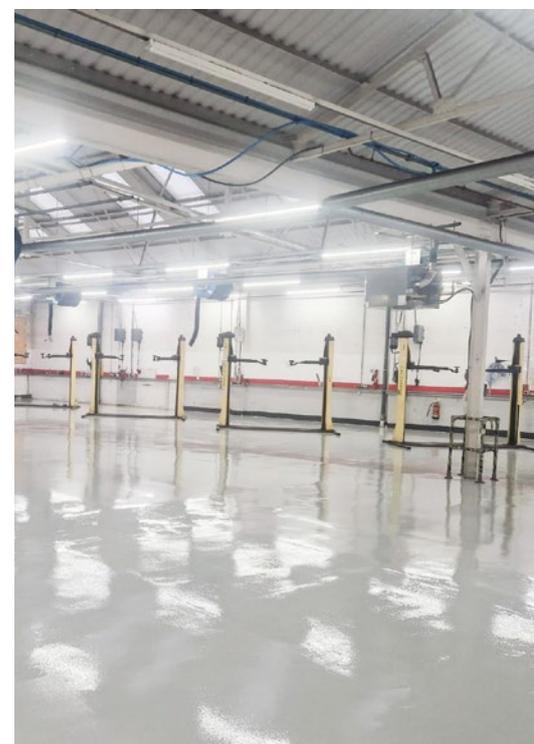

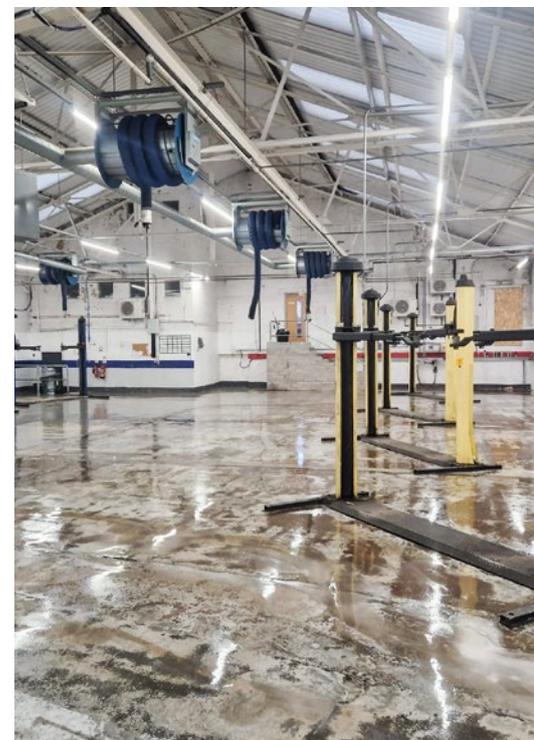

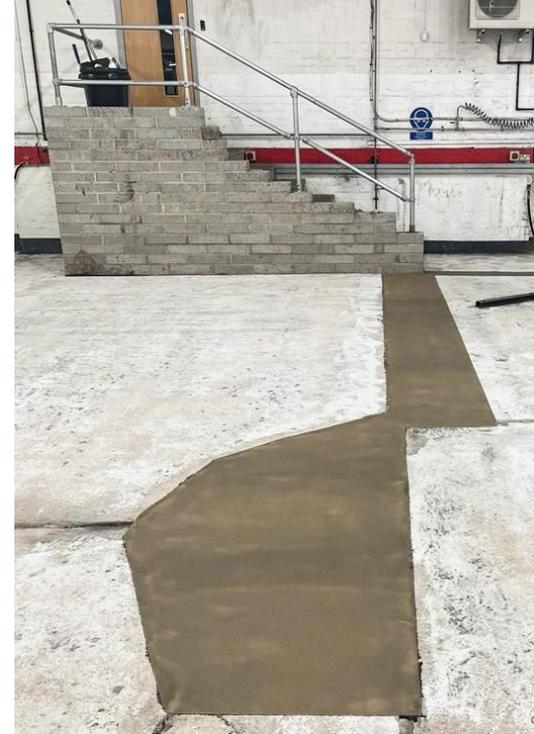

With nationwide installation teams, Quickset Resin Flooring prides itself on its combination of industry leading quality of

to chemical attack from petrol, engine oils and other substances typically present in car workshop environments.

The inclusion of anti-slip aggregates, encapsulated between the two coats of **vebro** EP Universal that make up the FeRFA Type 3 epoxy high-build floor system, delivered additional slip resistance in critical foot-fall areas where rainwater may be present such as in front of the facility's roller shutter doors, doorways and fire exits.

workmanship with durable, hygienic and cost-effective flooring solutions tailored to the client's environment.

Vebro Polymers and Quickset Resin Flooring have established a strong partnership delivering resin flooring solutions for a range of clients including IKEA, Honda and Hyundai.
