

vebro project showcase

Wetherby Group, UK

the challenge

A high-performance high build epoxy flooring system and linemarking was required for a North Yorkshire based manufacturer of performance building products.

meet the client

Wetherby Group comprises two companies. First established over 45 years ago, Wetherby's product range includes spray and textured wall coatings, and masonry paint systems. Laroc, a newer addition to the Wetherby Group, offers through coloured and thin-coat render systems.

The company also manufactures materials for a range of other suppliers through its white-labelling service.

the project

The company's Dalton manufacturing facility required a new floor coating system, after the previous finish had worn away and become unsafe in places.

Any flooring works had to be completed with minimal disruption to continuing operations, reducing the impact to production as much as possible.

key service criteria

Durable & resistant

Chemical resistant

Easy to clean & maintain

Finished with safety markings

Solvent-free & low odour

vebro's solution

After suitable mechanical preparation during the first phase, **vebrores** EP HBC was installed across the 1,000 m² floor area in RAL 7038 Agate Grey.

The pigmented, solvent-free, low odour epoxy floor coating system is designed to protect concrete substrates and is best suited to medium duty dry processing areas where a hard-wearing, chemical resistant floor finish is required.

meet the installer

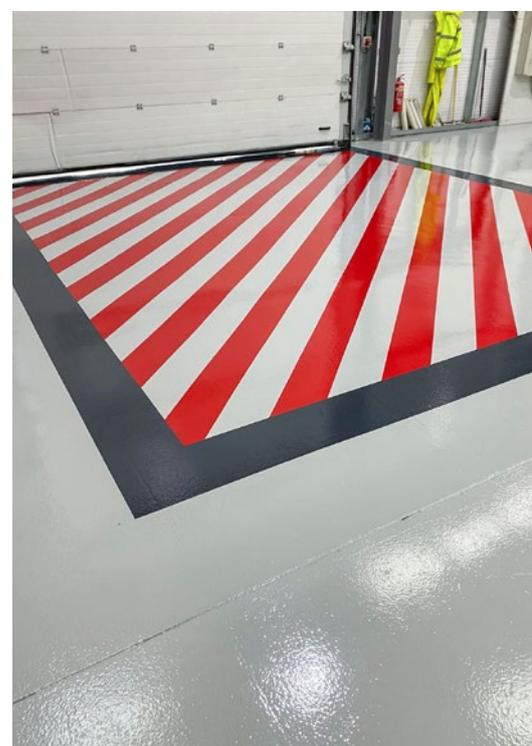

Founded in 1987, Coatech Ltd is a well-established installer of high performance resin flooring, serving a wide range of industrial and commercial sectors throughout the UK.

The company prides itself on its commitment to quality that is demonstrated in its product choices, continual improvement strategy and comprehensive management systems.

The busy manufacturing facility required appropriate walkway and zoning demarcation, which was completed using a palette of RAL colours in the same high build epoxy material.

Solid and hatched areas were added using RAL 3001 Signal Red and RAL 7024 Graphite Grey, as well as solid walkways in RAL 1003 Signal Yellow.

With an enviable reputation for consistently delivering high quality, durable and tailored solutions backed by technical and customer support, Coatech installs tens of thousands of square metres of flooring per year.
