## standard colours

Please note that lighter colours are more prone to discolouration or yellowing in polyurethane systems. In these instances, we recommend an aliphatic polyurethane sealer is applied on top to preserve the colour vibrancy. To discuss colour fast options, or for colour cards and samples, please contact [technical@vebropolymers.com](mailto:technical@vebropolymers.com).

Please note: the applied colours may differ from the examples shown within this guide. We have done our best to represent colours accurately. Unfortunately, due to print reproduction limitations and the varying nature of the calibration of computer monitors, exact colour fidelity is difficult to obtain. Actual samples should always be viewed before making a final decision, especially if colour accuracy or matching is key to your decision.
