

vebro RIBA approved CPD

Understanding Why Screeds Fail & Avoiding Litigation

overview

This 45 minute course, suitable for delivery during lunch, provides attendees with a deep understanding of the appropriate specification of sub-floor and wearing screed materials, as well as the difference between traditional and proprietary screeds, and the various installation types, in order to avoid screed failure and the litigation often associated with it.

CPD outline

- A big hello from Vebro
- Objectives & overview
- Design criteria & considerations
- Proprietary screeds overview
- Screed application & floor sections
- Causes of screed failure
- Good design practices

learning objectives

- Provide a brief overview of the design criteria and potential floor build ups, to gain the correct screed specification
- Compare the common screed types and their applications
- Understand the reasons for screed failure and identify appropriate solutions
- Produce the correct screed specification with good design practices in mind
