

# performance floors for public spaces

resin surface systems for outdoor  
environments, play, sport & more

**vebro** polymers

 FeRFA

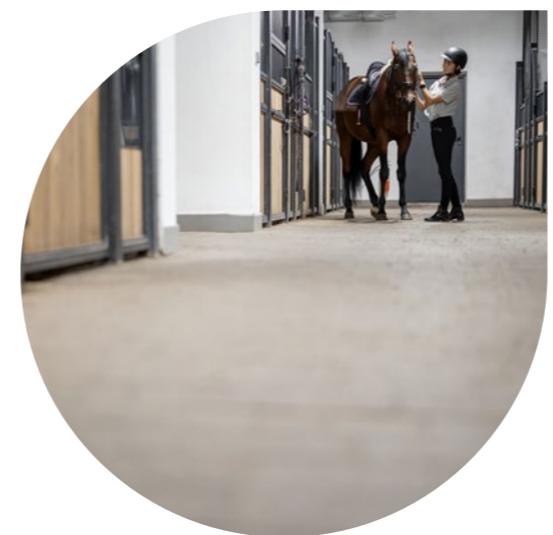

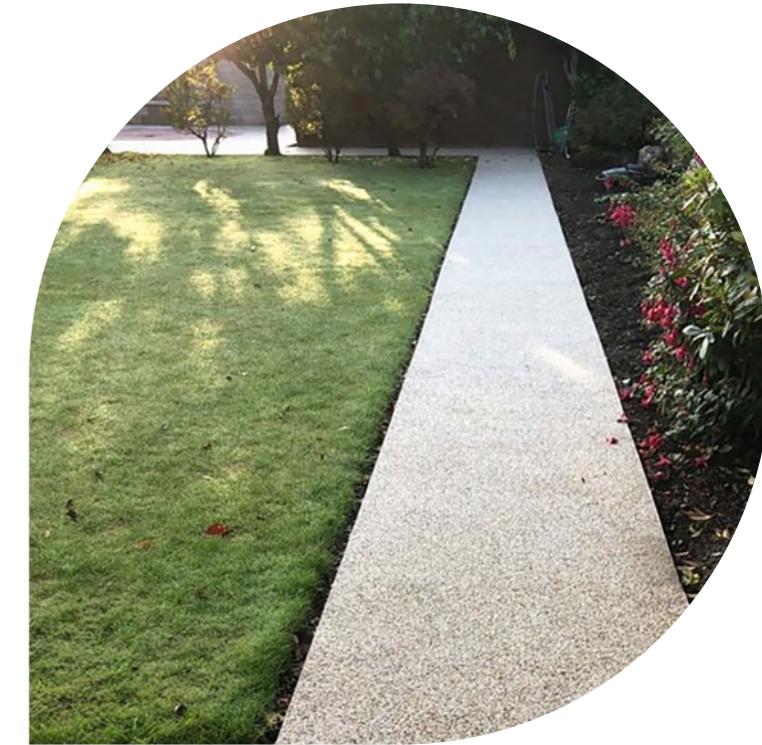

# external surfaces: deliver performance, aesthetics & durability

Resin surfacing systems are becoming the material of choice for a growing range of external environments – from pedestrian walkways, driveways and landscaped trails to playgrounds, public spaces, sports courts and even equestrian facilities.

With options that include resin bound aggregates, rubber crumb, mulch and polymer-based coatings systems, like those in the **vebrobound** and **vebrosport** ranges, can be tailored to suit almost any outdoor setting.

These surfaces combine the technical benefits of high-performance resin – durability, permeability, UV stability and slip resistance – with the aesthetic flexibility to work beautifully in both natural and urban environments.

Available in a wide variety of colours, textures and build-ups, outdoor resin systems can be designed to perform in highly specific contexts, while contributing to the overall usability, safety and appeal of external spaces.

## key performance benefits

Range of systems designed for car parks, driveways, paths, play areas, sports courts & animal use

Resists wear, weather, impact & UV; built for durability in outdoor, high-use settings

SuDS-compliant porous systems control water; reduce pooling, freeze / thaw damage & runoff

Slip-resistant in all conditions; fall-rated & hoof-safe options available where required

Integrates seamlessly in natural or urban spaces; wide range of colours, textures & finishes

No loose fill or soft spots; easy to maintain with lasting surface performance

Sports court flooring systems offer permanent elasticity and equal ball reflection

Equestrian system available, designed to reduce impact to joints and improve well-being

## car parks, driveways & drop-off zones

First impressions start underfoot. Car parks, driveways and drop-off areas take the brunt of daily foot and wheeled traffic, as well as whatever the weather brings, but still need to look sharp.

The right surfaces for outdoor spaces – especially those that will experience wheeled traffic – offer high performance without compromising on style.

**vebrobound** Car Park and **vebrobound** Driveway systems can handle vehicles with ease, drain efficiently in all conditions, and retain a beautiful finish over time.

## pedestrian pathways, courtyards & nature trails

Paths and courtyards do more than move people. They guide flow, set rhythm and frame the surrounding landscape. Whether urban or natural, they should feel intuitive, safe and grounded in their setting.

Well-considered surfacing supports all-season movement while reducing erosion, standing water and surface wear.

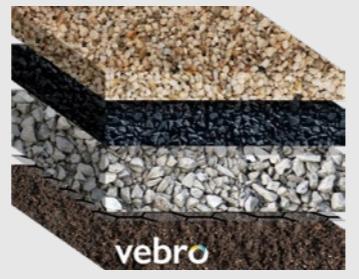

**vebrobound** Pedestrian, **vebrobound** Nature Trail and **vebrobound** Mulch deliver a subtle texture underfoot, permeability, and long-term stability, meaning these routes remain walkable, accessible and attractive.

# playgrounds & early years areas

Playgrounds and early years environments call for vibrant, impact-absorbing surfaces that can handle real-world use, while creating an engaging, inspiring impression.

**vebrobound** Play and **vebrobound** Mulch combine colour, compliance and comfort. Tested and compliant to BS EN 1177, these cushioned systems won't compress over time. The textured finishes provide a safe, slip-resistant surface in all weathers.

## sports courts & equestrian / animal areas

Spaces designed for movement demand more from the ground up. Whether it's fast footwork or powerful hoof-fall, the surface has to support performance, protect users and stay resilient.

Sports courts rely on energy, speed and control, and the surface has to keep up. **vebrosport** Courtfloor Eco and **vebrosport** Courtfloor Plus deliver a consistent finish in wet or dry conditions, with colours and demarcation lines that hold their clarity through sun, wear and repeated play.

Equestrian areas bring a different kind of intensity. Impact is heavier, movement unpredictable. **vebrosport** Equestrian is a soft, seamless surface that gives hooves the traction they need while supporting hygiene, drainage and easy washdown – essential for both welfare and maintenance.

# external surfaces systems overview guide

## resin bound systems

### vebrobound Car Park A

A SuDS compliant, PU resin bound surface system suitable for cars and motorcycles.

### vebrobound Driveway A

A SuDS compliant, PU resin bound surface system designed for residential driveways.

### vebrobound Play R

A SuDS compliant, wet pour PU resin bound surface system designed for playgrounds.

### vebrobound Nature Trail\*M

A SuDS compliant surface system combining rubber crumb & natural stone.

### vebrobound Pedestrian A

A SuDS compliant, PU resin bound surface system designed for terraces, patios & paths.

### vebrobound Mulch M

A SuDS compliant, wet pour PU resin bound surface system that imitates natural bark.

## resin bound finishes available

## sports floor systems

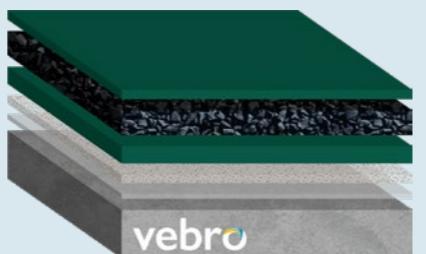

### vebrosport CourtFloor Eco s

A water-based, economical PU tennis court flooring system for installation on concrete substrates.

### vebrosport CourtFloor Plus s

A water-based, multi-layer PU tennis court flooring system with permanent elasticity.

### vebrosport Equestrian s

A seamless, heavily cushioned polymer flooring system designed for use in equestrian facilities.
