agility

reliability

we only succeed when you do...

Vebro Polymers was formed in 2020 by like-minded individuals who — at the time — had over 200 years' combined experience in the polymer flooring, coatings and construction chemicals industry.

The company was founded on a simple service promise to customers, which aims to provide the best **quality**, **agility** and **reliability** in the industry.

This means simplifying processes, delivering on promises and supporting customer needs, requirements and growth plans together as partners when tackling new projects. To us, the Vebro promise is simple, **we only succeed when you do too!**

you've got a friend in us

Whether you're an **architect**, **engineer** or **specifier** looking to select the highest performing materials for your projects, or an **applicator** looking to partner with a polymer flooring supplier that offers more than just great quality products, Vebro Polymers is dedicated to building relationships that help us all succeed.

vebropolymers.com

Vebro Polymers is proud to work with a select group of applicator partners in its local territories — a network of approved specialist resin flooring contractors who we're confident will follow the appropriate preparation and application methods to deliver a fit-for-purpose, long-lasting floor in your facility.

global team, local expertise

Founded in the UK, Vebro Polymers has grown to serve local markets across the world. For local contact information, visit **vebro**polymers.com

our STAR+ approach

The team at Vebro Polymers are committed, right from the beginning of your flooring project through to aftercare. We work closely with our applicator partners to deliver on all the key stages of your project.

site survey & specification

Before any flooring works begin on site, the Vebro team, or one of our partners, will visit the site to complete a detailed and thorough site survey. This will allow our technical experts to produce a bespoke flooring specification that not only delivers on your specific service criteria, but also takes into consideration the substrate, condition, budget and construction schedules.

tracking

The team at Vebro understands the importance of each key stage in flooring application. That's why we work closely with our applicator partners throughout each project to ensure that every stage is delivered to the highest of standards.

application

At Vebro Polymers, we only work with experienced, trusted applicator partners and we're confident in their ability to install a fit-for-purpose floor coating system that meets the service criteria of your facility.

review

Once the floor is installed on site, our team will ensure everything is completed to our high standards, that all packaging waste is correctly disposed of in line with government regulations and that the floor is turned over to the client or follow-on trades.

+aftercare

Floor maintenance requirements will differ depending on your specific environment, the type of floor installed and how it is used each day. We work alongside our applicator partners to share with you the best practice for keeping your floor in top condition.

discover the **vebro** portfolio

We offer a wide range of high quality, chemically engineered polymer solutions designed for a number of different product applications.

vebropolymers.com

We're more than just a supplier,
we're a **partner** who can be
relied on for an **honest service**,
expert technical advice and
marketing support to boot.

We're in it with you and **we**
only succeed when you do.

Mark Verinder & Craig Brookes
Co-Founders, Vebro Polymers

where you'll find us

Our products and systems have been expertly designed for use in a wide variety of commercial and industrial applications. We can also provide specialist materials for use on fast turnaround new-build or refurbishment projects as well as those requiring subfloor preparation prior to the installation of final finishes.

vebropolymers.com

Each application area has a unique set of requirements when it comes to flooring performance. Vebro Polymers' broad range of resin floor coating systems and subfloor levelling and preparation products is designed to cater to each of these.

industrial & manufacturing

Floors found in industrial and manufacturing facilities are exposed to a wide range of different service criteria including heavy equipment and plant machinery, aviation oil spillages, hazardous chemicals, frequent forklift-truck traffic, electrostatic discharge – we could go on and on! Vebro Polymers offers a number of seamless industrial resin flooring systems that have been designed to meet a whole host of service challenges faced in industrial and manufacturing facilities.

food & beverage processing

Floors in food and beverage processing facilities can be subject to some really tough conditions, think high-pressure hot water washdowns, steam cleaning, exposure to corrosive acids and sugars, thermal shock and cycling, wet processes...the list is endless. Vebro Polymers' **vebrocrete** seamless polyurethane concrete range has been designed specifically for the demanding challenges of the food and beverage sector.

multi-storey car parks

Wearing surfaces in multi-storey car parks can present a wide range of challenges. Movement from heavy vehicles, exposure to corrosive automotive oils and exposure to the elements on semi-exposed decks can all quickly deteriorate the structure if not adequately protected against. Vebro Polymers offer a number of seamless epoxy, polyurethane and MMA resin wearing surfaces designed for installation on intermediate and lower basement decks of multi-storey parking structures – all of which offer individual benefits including flexibility, slip and chemical resistance, moisture mitigation and speed of cure.

commercial venues

Selecting a flooring system that can marry the performance requirements needed to cope with heavy footfall with a decorative, easily cleaned and maintained finish is a must in commercial venues. Vebro Polymers offers a number of seamless resin flooring systems that can tick all of the boxes above in terms of a decorative and durable finish, as well as a number of different self-smoothing underlayments and fast drying screeds to prepare the subfloor should other types of floor coverings be selected.

retail & shopping centres

Selecting a flooring system that offers the necessary chemical resistance, ease of cleanability and can be installed and ready to use quickly so as to minimise any disruption to trade are of utmost importance in retail & shopping centres. Vebro Polymers offers a number of seamless resin flooring systems that can meet the specific needs of the fast-moving retail world.

institutional buildings

The primary function of a floor finish in institutional buildings is to provide a durable, safe, clean, acoustically compatible, attractive and affordable surface. While the type of flooring may vary depending on the function of each institutional building this is largely true of all spaces. Our comfort flooring resin systems can be installed in a wide variety of custom colours and decorative patterns to make a bold style statement underfoot.
